 Product details

2WAJ ABBE Refractometer

It is used to measure refractive index ND and average color dispersion NF-NC of transparent and semi-transparent liquid or solid, also may be matched with constant temperature oven to measure refractive index ND with temperature 0°C-70 and measure sugar percent.

Therefore, it is an indispensability equipment in common use in factory, teaching and science research related to oil industry, grease industry, pharmacy industry, pain-making industry, food industry, daily-use chemical industry, sugar-refining industry and geological reconnaissance, etc.

Main technical parameter:

Measuring range of refractive index ND 1.300~1.700

Measuring precision of refractive index ND 0.0002

Min. division value of refractive index 0.0005

Measuring range of sugar consistence 0~85

Min. division value of sugar consistence 0.25

Weight of instrument 3

Whole set of instrument:

1. Mainframe 1
2. Special-purpose thermometer (with protection cover) 1
3. Standard sample 1
4. Bromized naphthalin 1
5. Screwdriver 1
6. Using instruction 1
7. Conformity certification
